1 Firmware Update

Plug in the device to the computer and start the software “BinDownload512HIDandUSART.exe”.

1. If not selected by the software automatically, **select the correct USB / COM port**
2. **Open the port** by clicking the button “Open Comport”
3. Click on “Open File” to **select the binary file** with the new firmware
4. Click on “Start Trans” to **start the transfer**
5. Once it is finished, the software can be closed with “**Exit**”

Note: The firmware included in the SDK is for non-HID usage.
