

Quick Manual I-Collect 2.0

Operation of the device

Before the first use, please load the device until it is fully charged. The device is fully charged when the LED changes from red to green. Press the button to turn on the device. If the device is powered on, you can scan with the button in the middle. You can scan transponders if you hold them on the bottom of the device. If the operation is a success, the device confirms with a „beep“. The I-Collects are delivered in the standard configuration with HID emulation, all other settings can only be made after downloading the documentation and software.

Pairing Method Description

- 1) After scanner power-on, the steady green LED show that the device is on.
- 2) Keep the button pressed for app. 8 seconds until the device confirms with a “beep”
- 3) Now both blue LEDs will flicker alternately
- 4) Device Bluetooth name is „BarCode Scanner HID“.When the device is in pairing mode, you can connect with it on your PC or Smartphone, if you select it in the Bluetooth settings.
- 5) Wait until a single blue LED lights steady and the buzzer signals, then the pairing was successful.
